Cybr373 Final Assessment - Group Project and Oral Presentation

[25% of Final Grade]

Due date for presentation slides: 21 October 2024 at 9am

Group presentation dates: 21-23 October 2024 (available times between 10 am to 2.30pm). Organise your group of 4 and sign up to a timeslot via https://ecs.wgtn.ac.nz/cgi-bin/teamsignup

All group presentations are expected to be in-person, with any exceptions to be authorised in advance by the course coordinator

No extensions will be given for this assessment, and late days cannot be used.

Scenario

You work for an organisation based in New Zealand, with a NZ customer base. Part of what your organisation is responsible for is storing, processing and accessing data of customers. This data includes information of NZ citizens and permanent residents including: *full name, full address, contact information, previous communication, and sales history. It also includes some sensitive data.*

Your business and the number of transactions your organisation needs to perform has grown in size but, due to the global downturn, finances are tight. You neither have the resources to upgrade your current hardware nor the expertise to manage this surge in the amount of information you need to securely store, transfer and process. You realise that a cloud service provider in **Namibia, Argentina or the Philippines** (Choose one country only) would be able to manage the secure processing and storage of your customers' data at a vastly reduced cost from that charged by your NZ-based supplier. These offshore cloud service providers claim to be specialised in cloud storage and processing and, provide attractive services such as:

- Availability: All stored files can be accessed anytime and from anywhere. The cloud service providers have an uptime of > 99.9%.
- Multi-tier backup storage ensures multiple copies of the data is backed up.
- Access and Security: They allow separate accounts for each employee with varying access right capabilities. Access to individual/all files and folders can be granted by your organisation's admin on the basis of the employees' usernames.
- Encryption of data while transfer and storage (256-bit AES encryption is used to transfer files between the clients and the cloud provider.)
- 24/7 online support

You need to consider whether you should (or can) outsource the processing and storage of the data (or parts of data) to the cloud service providers based in **Namibia, Argentina or the Philippines**, from both a regulatory (legal), and also an ethical viewpoint (your clients would not be aware of the changes in location and service provider). This offshoring change would take effect from February 2025.

Note:

You must research the regulatory (legal) and ethical considerations applied to cloud providers in that particular country (Namibia, Argentina or the Philippines), versus New Zealand.
You do not need to do a comparison of specific cloud providers and their services. You may give an example of a cloud provider if you wish, but it is not necessary**.**

Group presentation

In groups of 4, select **one country** from the list (Namibia, Argentina or the Philippines), research the following issues and present a cohesive presentation.

Points to consider:

Each point below A, B, C and D need to be covered by individuals in the group. All four points need to be covered.

A What laws or regulations would need to be considered, in both NZ, internationally and in the country you have selected, regarding the transfer, storage and processing of the data (or parts of the data)?

B What particular aspects must be considered in the NZ context (e.g. Privacy Act, adherence to and respect of the Treaty of Waitangi)?

C Are there any local or international standards or frameworks you considered in your selection process of the hosting country and associated cloud providers? (must apply to all cloud providers in the country). Are there any technical certifications which a (any) cloud provider must possess to assure you of their capability to handle your sensitive data?

D What ethical considerations may arise as a result of moving this data offshore (to your selected country)? What would be an appropriate response to these?

Deliverables and distribution of marks:

A. Individual components (60 Marks Total): 15% weighting

This is an individually graded mark, and will apply to each group member only. It will be based on individual content, knowledge and individual presentation.

i. **[15 Marks]** Completeness – Did you carefully and comprehensively consider and research points listed in your 'Point to Consider'?
ii. **[15 Marks]** Accuracy – How accurate was the information you presented?
iii. **[15 Marks]** Presentation – Are effective presentation skills displayed (e.g. including make eye contact, don't fully read from notes, use a clear voice, does the presentation fall within the time constraints?)
iv. **[15 Mark]** Questions – Are you able to answer questions on your group's topic at the end of the presentation?

B. Group components (40 Marks Total) 10% weighting

The remaining 40 Marks will be marked across your entire group, graded on cohesiveness, and group presentation. The same mark will be allocated to all group members for the group components.

i. **[20 Marks]** Completeness – Does the group presentation overall carefully and comprehensively consider and research points listed in the sections above?
ii. **[20 Marks]** Is your presentation cohesive and does it flow between group members?

Group presentations

- This assessment is to be completed in **groups of 4**
- If you cannot find a group, you must let the course coordinator (Lisa) know via email by **Tuesday 1 October 2024.**
- All presentations are expected to be in person. If your team needs to present remotely via Zoom, you will need to organize this in advance by emailing the course coordinator (Lisa). Limited Zoom presentations will be accepted, with valid reasons only
- Each student in the group must take a turn presenting
- Use an appropriate PowerPoint theme for your presentation
- Your group must work together to ensure that your presentation slides present and flow cohesively, and that you know each other's content. If any team member cannot attend due to illness, the rest of the group should present their component
- You will need to sign your group up to a preferred presentation slot (**21-23 October**). The presentations will take place between **10-2.30 pm.**
- The entire group presentation must not take less than 15 minutes, or exceed 22 minutes. Outside of these time limits, marks will be deducted. If you reach 22 minutes, your group's time will be ended, so it is important to practice both individually and as a group.
- Provide any reference information (e.g. websites or legislation) on a reference page at the end of the powerpoint presentation.
- You should only research and share information within your group.

What to submit:

❖ Each group member must submit a pdf of your group's powerpoint slides. **Due date for presentation slides is 21 October 2023 at 9am**
